

SAINT-GOBAIN ACHIEVES THE FIRST ZERO-CARBON PRODUCTION OF FLAT GLASS IN THE WORLD

Saint-Gobain has become the first player in the world to achieve zero carbon production of flat glass.

This technological feat was achieved last week by using 100% recycled glass (cullet) and 100% green energy, produced from biogas and decarbonized electricity. It was implemented for one week in Saint-Gobain's flat glass manufacturing plant in Aniche, northern France.

By mobilizing the network of partners developed by Saint-Gobain, the focus was placed on circularity, with the use of 100% cullet from end-of-life glass from renovation or demolition sites and from production offcuts. The Group's industrial and research teams succeeded in adjusting all of the furnace's technical parameters to this dual challenge of operating with 100% recycled material and 100% biogas, while ensuring the right optical quality of the glass. This pilot production demonstrates Saint-Gobain's capacity for innovation throughout the value chain.

This achievement is a clear demonstration of Saint-Gobain's commitment to reach carbon neutrality by 2050. It complements the Group's investment announced last year to build the world's first carbon neutral plasterboard plant in Norway. It further strengthens the Group's position as the worldwide leader in light and sustainable construction and its leading role in helping to build a carbon-neutral economy.

ABOUT SAINT-GOBAIN

Worldwide leader in light and sustainable construction, Saint-Gobain designs, manufactures and distributes materials and services for the construction and industrial markets. Its integrated solutions for the renovation of public and private buildings, light construction and the decarbonization of construction and industry are developed through a continuous innovation process and provide sustainability and performance. The Group's commitment is guided by its purpose, "MAKING THE WORLD A BETTER HOME".

€44.2 billion in sales in 2021

166,000 employees, locations in 75 countries

Committed to achieving Carbon Neutrality by 2050
