LE PONTET CERAMICS PLANT (84)

In the Ceramic Materials division of the Group's Innovative Materials business, the SEPR Le Pontet site manufactures electro-fused refractory products used to build glass furnaces and for the transformation of non-ferrous metals, as well as high-tech pellets, grains and powders used in a large number of industrial applications such as microgrinding (inks, paints, minerals) or the spray-based surface treatment of metals. Created in 1947, the Le Pontet plant has eight smelters covering a total area of 25 ha. and exports over 80% of its products.
